# AI-powered Guides assistant to search content

While authoring your documents in the Web Editor, you can use the GenAI-based Guides assistant. This conversational search feature helps you find relevant content from the Adobe Experience Manager Guides Documentation. You can ask your questions and get answers in an informative way. You get the appropriate content from authentic documentation, not any Web-based search. This search is entirely conversational. You can ask questions, and then, based on the response, you can also ask further questions. The response also includes links to the articles, which you can refer to for details.

For example, you may want to create a topic for your documentation. You can ask, *How to create a topic?* You get a response and the links for the related articles. Then, if you want to learn how to generate the PDF output for the document, you can ask questions about it.

When you open the Web Editor, the **Guides assistant** panel appears on the right.

> [!NOTE]
>
> Your administrator must configure the **Guides assistant** feature. For more details, view the Configure the AI-powered Guides assistant to search content section in the Installation and Configuration Guide for Cloud Services.

*View the **Guides assistant** panel.*

Perform the following steps to view the conversational search for finding appropriate content to resolve your queries:

1. Select **Guides assistant** ⌨ to open the panel.

   > [!NOTE]
   >
   > In the global or folder-level profiles, your administrator needs to define the default questions that appear in the panel.

2. Type the question to find the related content in the Experience Manager Guides documentation. You can select the default question in the panel or type your question in the text box.

3. Select **Send** ⌁ or press **Enter** to view the response to your questions.

   Depending on your question, you may view the content, applicable images, and links to the articles.
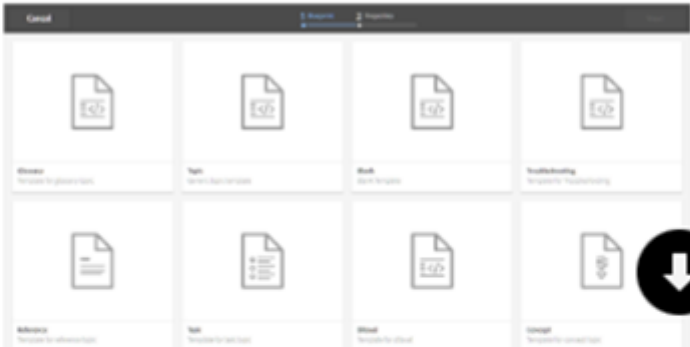

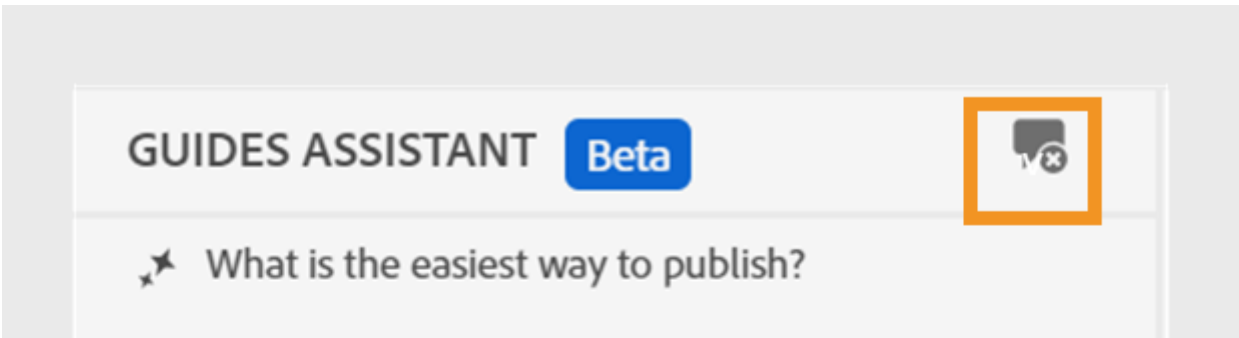

{width="300" align="left"}

Select the sample question and view the content and images in response.

4. Select the links to the articles at the end and view detailed information about your question.

5. Select **Clear Conversation** ✈ to remove the conversation history from the panel. You can then start a fresh conversation and find the relevant content.

This smart feature helps you quickly find the authentic information. It minimizes the effort of manual content searching, allowing you to concentrate more on generating new content.
